Interior Walls: **Yes**

Interior Floors: **Yes**

Kitchen Countertops: **No**

Other Countertops: **Yes**

Wet Areas: **Yes**

Traffic: **Heavy Commercial**

COLORS : Cream , Noce

ABRASION RESISTANCE

High

This material has relatively high abrasion resistance. It rates as a 7 or higher on the Mohs scale. Quartzite or granite typically fall into this range. This material is less likely to scratch than marble, limestone, onyx, slate, etc.

ACID SENSITIVITY

Minimal

This material is minimally sensitive to acids. It will not acid etch or lose its surface sheen when exposed to acidic liquids such as lemons or tomatoes.

ABSORPTION

Moderate

This material has a low to moderate absorption rate. Always seal this material prior to use. To reduce the appearance of stains, always wipe up spills immediately. Oil and highly-pigmented liquids can penetrate and stain the stone and may need poultice to remove the stain.

FREEZE-THAW

Not Recommended

Due to known material weakness or because this material has not been tested, this material is not approved for use in exterior applications.
